

End the Epidemic: Data Brief 2022

Over the past 6 months, 130 individuals facing food insecurity & chronic disease participated in the program, receiving home-delivered produce boxes.

1

96% of participants were food insecure at the start of the program, compared to 94% at the end of produce deliveries, suggesting a high continued need for services.

2

Participants were highly satisfied with the produce provided, with 77% reporting they were completely or very satisfied.

3

Feedback suggested the produce helped meet health goals:

- 57% said it helped them take medications as directed
- 89% said it helped to comply with nutrition recommendations
- 86% reported it made it easier to prepare healthy meals
